IAEG C 28 - Reliability quantification of the geological model in large civil engineering projects

Literature

The Italian group of the IAEG started in September 2007 the works of a national technical commission on this topic. According to the discussion undertaken by Italian group a guideline has been published (see http://www.iaeg.it/comm_opere_sott.htm), adopted as input document of C28.

From this guideline the following relevant literature is taken:
