

Dr. Janusz Wasowski is a senior geologist at CNR-IRPI (National Research Council - Institute for Geo-hydrological Protection) in Bari, Italy. Currently (2019-2022) he also serves as the Official Representative of the National Research Council of Italy to International Association for Engineering Geology and the Environment (IAEG). Dr. Wasowski is qualified as Full Professor in Applied Geology and Geomorphology in Italy (since 2017). Since 2016, he is also the Editor-in-Chief of Engineering Geology (Elsevier), and since 2018, a Visiting Professor at the State Key

Laboratory for Geohazard Protection (SKLGP), Chengdu University of Technology (CDUT), China. For several years he has held the position of Science Officer of the Natural Hazards Group Programme, European Geosciences Union (EGU).

Dr. Wasowski's work has covered a broad spectrum of research topics ranging from slope instability and landslide assessment, collateral seismic hazards, geotechnical field investigation and in situ monitoring, to exploitation of air/space-borne remote sensing and geophysical surveying in engineering geology. He has also served as a consultant, focusing on landslides and other geohazards and on the applications of satellite multi-temporal interferometry for monitoring terrain and infrastructure instability.

Dr. Wasowski is an author/co-author of about 200 scientific/technical contributions (journal articles, books/book chapters, proceedings articles), majority in international publishing venues <https://scholar.google.com/citations?user=2GFISNkAAAAJ&hl=it&oi=ao>
